SUMMARY

First-year IT student at VUT FIT, looking for a paid internship or part-time job in software or AI. I build products by directing AI coding agents (Claude Code, Codex): I write the specs, have every change reviewed and tested, and decide what ships. So far: a tax-law assistant prototype, instant QR payments for small e-shops, and an add-on that cut my AI context per reply by 38%.

EDUCATION

Brno University of Technology (VUT FIT) Sep 2026 - 2029 (expected)
Faculty of Information Technology, Bachelor's programme (BIT), first year

Courses this semester: Introduction to Programming Systems (IZP), Introduction to Software Engineering (IUS), Discrete Mathematics (IDM), Linear Algebra (ILG), Electronics for Information Technology (IEL)

BESST Private Bilingual Grammar School, Trnava 2021 - 2026
Slovak Maturita (school-leaving certificate); Cambridge International A Levels (June 2026): Mathematics (9709) A*, Computer Science (9618) A*, Physics (9702) A

PROJECTS

Korpuslab - RAG assistant for Slovak tax law (prototype) Jun - Aug 2026
Stack: Python, FastAPI, Qdrant, vLLM | https://korpuslab.sk | https://fs-platforma.vercel.app

- Built a prototype RAG assistant that runs a local LLM (vLLM) and a vector database (Qdrant) to answer tax-law questions with citations; found the right law paragraph for 48 of 48 test questions, 864 automated tests pass.
- Added a document review that names the law for each finding; found 6 to 8 of 8 planted errors in 3 documents.
- Directed a 3-agent team (Claude Code, Codex, Kimi); built an iOS app that ran on a real iPhone.

AI agent tools - compaction add-on and agent workflow Sep - Oct 2026
Stack: TypeScript, Python, Claude Code plugins

- Extended an MIT-licensed Claude Code plugin into fast-jev-compaction (compacts long chats early); my evals: mean context per reply fell from 214k to 133k tokens (-38%).
- Designed a multi-agent workflow (6 roles, real tests before "done", review before merge).

QRModul - instant QR payments for Slovak e-shops (tested, not yet used by a shop) Jul 2026
Stack: PHP, WooCommerce, MQTT, mTLS | https://qr-platba-nop.vercel.app

- Built a WooCommerce plugin that shows a payme.sk QR code, requests a transaction over mTLS from the national NOP system and confirms the order by MQTT; submitted to wordpress.org.
- Added 2 payment checks (SHA-256 hash, ISO 20022 status) before an order counts as paid; a wrong-amount payment was rejected on the bank's test system.

Study system and uni tools - AI-navigated course library, fitcheck Jul - Oct 2026
Stack: Python, C11, Shell, Valgrind, Claude Code, Codex

- Collected course materials from the university sites into one library (102 PDFs, about 300,000 words); my AI agents navigate it and build explanations and diagrams for me, with 6 mentor commands (/prep, /tutor, /drill, /mock, /review-code, /week).
- Built fitcheck, a C test harness: 4 gates per case (strict build, output, ASan and Valgrind, timeout).

SKILLS

AI-assisted development: directing Claude Code and Codex agents (specs, reviews, tests)

Languages: C and Python (studying); used in projects: TypeScript, PHP, JavaScript, HTML, CSS, Shell

Tools: FastAPI, Qdrant, vLLM, WooCommerce, MQTT, Git, Linux, Valgrind, Vercel

ACTIVITIES

Rebuilt the Jalšovské chaty website with AI agents: https://jalsovske-chaty-web.vercel.app 2026

LANGUAGES

Slovak: native | Czech: B2 | English: C1
